DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21, 26, and 27, drawn to a method for generating and evaluating property estimation grids, classified in class 702, subclass 57.
- II. Claims 22-25, drawn to a specific sensor configuration, classified in class 324, subclass 457.
- III. Claims 28 and 29, drawn to a method for determining the properties of a material, classified in class 702, subclass 30.

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the property estimation method does not require the specifics of the sensor conductor construction in order to define the material properties. The subcombination has separate utility such as detecting the presence of one material on top of another material.

Inventions I and III are related as combination and subcombination because in the instant case, the combination as claimed does not require the particulars of the

subcombination as claimed because the property estimation method does not require the specifics different dielectric liquids to define the material properties. The subcombination has separate utility such as any of a plurality of capacitance measuring methods, such as material thickness measurements.

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as detecting the presence of one material on top of another material. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Mr. James Smith on March 4, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected

Art Unit: 2857

invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey R. West whose telephone number is (703)308-1309. The examiner can normally be reached on Monday through Friday, 8:00-4:30.
